### Accessories

Time Stream Cables - 3.5mm / 4.4mm / 2.5mm  
Silver plated Copper litz wire conductors  
Stereo or Balanced plug to custom beryllium copper MMCX  
Campfire Audio Marshmallow Tips & Silicon Earphone Tips  
Earphone Clearing Tool, Campfire Audio Pin  
Dimensional Folding Leather Case

### Fit Guide

Insert Trifecta into your ear with the cable exiting the  
earphone forward and legs upright. When held in the  
corresponding hand between the forefinger and thumb, the  
spout will be nearest the finger facing forward. Wrap cable  
behind the ear once the earphone is positioned securely in  
your ear. Achieving a comfortable and airtight seal once  
the earphone is in your ear is essential to enjoying the  
earphone's sound as intended. Try a range of sizes to find  
the best match for you. Also try different sizes for each ear  
until you find the right combination that works best for you.

## Reference Guide

### Removing the cable:

To remove the cable, pull it in the direction parallel to the earphone connector. Avoid  
detaching the cable at an angle to avoid potential damage to the MMCX connectors of the  
cable or the earphones.

### Notes on use and ownership:

Each Campfire Audio Trifecta holds sensitive and finely tuned dynamic drivers. Sudden shock  
or direct impact on the earphones can cause damage or alter the acoustic performance of  
the earphone's drivers. Take care of your earphones, and you'll have years of enjoyment from  
them. Accidental damage to the earphone drivers is not covered under the earphone's  
warranty protection and is subject to a reasonable fee for repair.

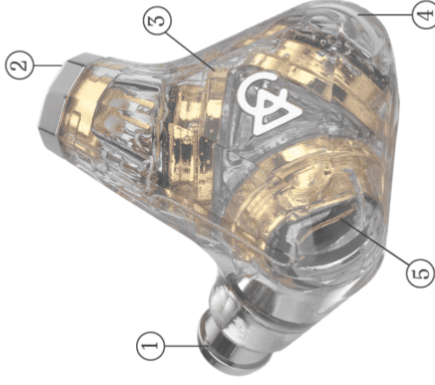

Keep the earphone openings clear of debris and wax for optimal performance. Carefully use  
the clearing tool included with your earphones to remove build-up from the earphone spout.  
Avoid moisture build-up on the surface and in the interior of the earphone body. Allow your  
earphones to dry promptly if exposed to water.

Small bubbles visible in the interior of Trifecta are normal and a natural result of our  
hand-build process.

Avoid opening the case of the earphone. This will damage the seal of the drivers and shell,  
altering the precision tuning of your Trifecta. Additionally, altering the build will void the  
warranty of your earphone.

Extended listening periods at high levels can negatively impact your hearing over time.  
Please enjoy your earphones responsibly.
